Reactjs Developer

Hrsimpli Company

07/2024 - 09/2024

India

HRSimpli is an emerging company focused on developing innovative digital solutions. Currently in the early stages of building its website, HRSimpli is working on creating a dynamic job portal platform specifically designed to help students connect with potential employers. The platform will offer features tailored to students, making it easier for them to discover job opportunities, internships, and entry-level positions that align with their skills and aspirations.

PERSONAL PROJECTS

Personal Portfolio

- <https://vanshajnarayanportfolio.netlify.app>
- Designed and developed a personal portfolio website to showcase projects.
- Utilized React.js for a smooth and interactive user experience, optimizing for various screen sizes.

E-commerce Website

- <https://vanshajshoppingsite.netlify.app>
- Developed a responsive e-commerce website using React.js, showcasing product listings and dynamic user interfaces.
- Implemented state management for the shopping cart and integrated a mock RESTful API for product data.
- Utilized React Router to create seamless navigation between product categories, improving overall user experience.
- Utilized Axios or Fetch API to interact with a mock RESTful API, fetching and displaying product data in real-time.

Music Player

- <https://vanshajmusicplayer.netlify.app>
- Integrated third-party libraries or APIs for audio playback, ensuring compatibility and enhancing the user interface with features like play and pause.
- Designed an intuitive and visually appealing user interface, displaying album artwork, track details, and player controls in a cohesive layout.
- Implemented features such as playlist creation, shuffle/repeat options to enhance user engagement.

News Website

- <https://vanshajsamacharsite.netlify.app>
- Developed a responsive news website using React.js, creating a modern and user-friendly interface for consuming news content.
- Utilized conditional rendering to dynamically display article details, images, and related information based on user interactions.
- Utilized Git for version control, maintaining a well-documented and organized codebase for seamless collaboration with team members.
